Proposed Acquisition of 87-Foot Coastal Patrol Boats: Draft Programmatic Environmental Assessment

SUMMARY: The Coast Guard announces the availability of a draft Programmatic Environmental Assessment on its proposal to replace its aging fleet of 82-foot patrol boats with 87-foot coastal patrol boats. We request your comments on the Assessment.

Proposed Action: The Coast Guard proposes to buy forty-one 87-foot coastal patrol boats to replace its aging fleet of 82-foot patrol boats. The new boats would be similar to nine 87-foot prototypes currently in use by the Coast Guard. The new boats would be located at existing facilities throughout the continental United States. As with the 82-footers, the new boats would be used for search and rescue, maritime law enforcement, alien migrant interdiction, drug interdiction, marine environmental response, recreational and commercial boating safety, environmental law enforcement, port safety and security, and military operations support. The new boats are needed because the existing fleet of 82-footers, constructed between 1960 and 1970, are reaching the end of their life expectancy and are becoming increasingly difficult to repair. Without a working, dependable boat to carry out our primary missions, our ability to serve the public will be severely hampered. Also, we expect the demands of our missions to increase over the next few years. We expect to see an increase in law enforcement, drug interdiction, alien migrant interdiction, and marine environmental response. The proposed action would improve our current level of service and help us meet our increased needs in the near future.

ACTION: Notice of availability and request for public comments.

DATES: Comments and related material must reach the Docket Management Facility on or before March 25, 2000.

NORTH ATLANTIC RIGHT WHALES WARNING:

From December to March the coastal waters between Altamaha Sound, GA, and Sebastian Inlet, FL, are the only calving grounds for the endangered North Atlantic right whale. Right whales are the rarest whales in the world and are protected under law from disturbance or injury by the endangered species act of 1973, and the Marine Mammal Protection act of 1972. Right whales, especially females and their calves, frequently lie at the surface. This behavior makes them vulnerable to collisions with ships, which are a significant source of mortality. Vessels operating within 25 miles of shore between 31-27N and 30-00N and within five miles of shore from 30-00N and 28-00N should take precautions to avoid collisions with right whales.

Mariners should maintain a distance of 500 meters from any whales sighted. If a right whale is sighted, record the position, note direction of the whale's travel and record the time. Whale sightings should be reported to USCG Group Mayport, FL via VHF-FM radio or by calling the GA Department of Natural Resources at 1-800-272-8363.

DISCONTINUANCE OF 121.5 AND 243 MHz FOR SATELLITE DISTRESS ALERTS

The Cospas-Sarsat Program has announced plans to terminate satellite processing of distress signals from 121.5 and 243 MHz emergency beacons. No effective date has been set for this action, however, it is expected to occur far enough into the future to avoid a crisis to mariners, aviators and other users of this system. Users of the system will have to switch to emergency beacons operating at 406 MHz, which are more reliable and provide search and rescue agencies complete information that they need to do their job, in order to be detected by satellites.

Reasons for the Copas-Sarsat to discontinue use is driven by guidance from the International Maritime Organization (IMO) and the International Civil Aviation Organization (ICAO). These two agencies are responsible for regulating the safety of the ships and aircraft on international transits and handle international standards for maritime and aeronautical search and rescue missions. In addition, 121.5 MHz false alerts inundate search and rescue resources which impact the effectiveness of lifesaving services.

Individuals who plan on buying a new distress beacon need to be aware and take the Cospas-Sarsat decision into account. For further information contact United States Coast Guard Headquarters by telephone at (202) 267-1586 or e-mail: psteward@comdt.uscg.mil

IV. CHART CORRECTIONS

(Explanation of Format)

Corrective action, affecting charts, is contained in this section. Chart corrections are listed numerically by chart number, beginning with the lowest and progressing through all charts affected. The correction listed pertains to that chart only. It is up to the mariner to decide which charts are to be corrected. The following example explains the individual elements of a typical correction.

Chart number	Chart edition	Edition date	Last Local Notice to Mariners	Reference datum	Source of correction	Current Notice to Mariners
11534	26th ed.	12/14/91	Last LNM 41/92 (TEMP) Myrtle Grove Sound to Fear River to Casino Creek ADD *Boguse Channel Light 1, FI G 2.5s, 16 ft, 7M	NAD 83	(CGD07)	06/93
					32-48-00.000N 79-15-00.000W	
	Corrective action		Object of corrective		Position action	

The letter (M) immediately following the chart number indicates that the correction should be applied to the metric side of the chart only. (TEMP) indicates that the chart correction action is temporary in nature. Courses and bearings are given in degrees clockwise from 000 true. Bearings of light sectors are toward the light from seaward. The nominal range of lights is expressed in nautical miles (m). (*) Asterisk is used to identify Private Aids.
